DATAMINE

Production bundle for

PROCESSING (METALS)

Datamine's Production Bundle for Processing (Metals) brings together production accounting, plant performance monitoring, blending optimisation for consistent plant feed, and inventory management into one connected workflow for metallurgical and processing teams.

Gain trusted visibility across the processing flow with auditable metallurgical accounting, trusted plant data, real-time operational insight, and integrated production data that validates inputs, automates mass balancing, and consolidates plant data to improve recovery and reporting certainty, improve reporting speeds, reduce metal losses, support feed consistency, enable earlier loss detection, and drive more confident operational decision-making.

Product	What it's for	Highlights
PRODUCTION ACCOUNTING	Metallurgical accounting	Metals Balancing & Accounting with compliance (AMIRA P754)
CENTRIC OPS	Plant operations monitoring	Throughput tracking; Performance metrics
MINEMARKET Inventory Management & Tracking	Blending optimisation and plant feed consistency	Material tracking; Blending; Stockpile management
CENTRIC ANALYTICS	Operational analytics	Performance dashboards; Process optimisation insights
